Muhammad Awais

Full-Stack Web Developer

+92-327-2726270 | Karachi, Pakistan | awaisshaikhcs786@gmail.com | Portfolio | LinkedIn | GitHub

Summary

Full-stack developer and final-year Computer Science student experienced in client websites, internal business systems, and multi-tenant applications. Delivered five full-stack client websites and built an internal CRM end to end. Combines React/Next.js, Node.js, and Django development with AI/ML skills and recommendation-system experience.

Experience

Full-Stack Developer (Full-Time) - Yellow Solutions Jul 2026 - Present

- Built an internal CRM end to end, implementing the frontend and backend for in-house project management and data tracking.
- Delivered five full-stack client websites and currently work on five client projects, developing features and tailoring functionality to client requirements.
- Maintained and enhanced internal websites and platforms, including Yellow Tools, Yellow Agency, and yellowsolutions.pk; contributed to a learning management system.

Developer Intern (Remote) - Auton8 Aug 2026 - Sep 2026

- Developed frontend and backend features for an internal workflow-recording application, enabling users to capture and save step-by-step actions for automated testing.
- Built reusable Next.js components and Node.js/Express REST APIs to store and retrieve workflow data in MongoDB.

Full-Stack Developer (Contract) - BoxTech | Dubai, UAE | Remote Apr 2026 - Jun 2026

- Developed a multi-tenant truck-tracking system with isolated data access and tenant-specific workflows for multiple client organizations.
- Designed PostgreSQL schemas and REST APIs for fleet tracking and reporting; built an AI chatbot backend with conversation management, message storage, and API integrations.

Technical Skills

Languages: JavaScript, TypeScript, Python, SQL, C, C++
Frameworks / Libraries: React.js, Next.js, Node.js, Express.js, Django REST Framework
Databases / BaaS: PostgreSQL, MongoDB, MySQL, Redis, Supabase
AI / Machine Learning: LLM fine-tuning, deep learning, recommender systems, Pandas, Scikit-learn
Tools / Platforms: Git, GitHub Actions, Docker, Linux, Vercel, Render, WordPress

Projects

FORKED NUCES | *Next.js, Django REST Framework, PostgreSQL, Redis, Docker* Live | GitHub
Open-Source Student Collaboration Platform

- Built the platform end to end for FAST-NUCES students to register, publish projects, and raise issues for open-source contributions.
- Enabled students to browse project issues, contribute solutions, and collaborate on resolving them.

Investment Recommendation System | *Python, Pandas, Scikit-learn, Streamlit* GitHub
Hybrid Investment Recommendation Engine

- Combined collaborative (SVD), content-based, and demographic/risk filtering to personalize stock and fund recommendations.
- Integrated weighted scoring and an interactive Streamlit interface to rank investments based on user profiles and preferences.

Guilty by Data | *React.js, Supabase, Vercel* Live
Data Analytics Competition Platform

- Designed data-analysis questions and built the competition platform for participants to access challenges and submit solutions.
- Implemented scoring, participant leaderboards, and an admin dashboard to manage questions and competition content.

Education

BS Computer Science, FAST-NUCES, Karachi 2023 - 2027 (Expected)
CGPA: 3.12 / 4.00

Honors and Awards

Coder Cup: batch runner-up | **Vibe Coding Competition:** runner-up
